"IMAGING SOLUTION SPECIALISTS"

Choose the FCR system that best fits your practice.

- **The FCR XL-2 is perfect for higher-volume environments.**
- It can process up to 94 images per hour – yet it fits right into small exam rooms or offices where space is limited. The FCR XL-2 can handle even the busiest periods in your office.
- **The FCR XL-2 is capable of producing high resolution (50 micron) scans for 18x24cm and 24x30cm sizes, making it ideal for orthopedic and extremity applications where seeing fine detail is critical.**
- **The FCR XC-2 is ideal for lower-volume or off-site locations**
- With throughput speeds of up to 72 images per hour, it's the smart choice for practices with lower caseloads that simply won't compromise on image quality.
- Also perfect for off-site locations that need to transmit images back to another practice.

Advanced Image Processing

Issues often associated with image stitching software include difficulty with image alignment and variations of density on the composed image. Fujifilm's comprehensive, advanced image composition processing eliminates manual alignment requirements and compensates for differences in density in the image. Fujifilm's Image Stitching Software enables faster exam processing, higher diagnostic confidence and quicker image interpretation.

Space-saving work area for maximum department efficiency.

The FCR XL-1 and XC-1 cart's compact and attractive design houses all of the key components in the XL-1 and XC-1 system: XL-1 or XC-1 reader, Flash IIP console workstation and cassettes.

Featuring countertop space and cassette holders, the XL-1 and XC-1 cart maximizes utility of the small XL-1 and XC-1 footprint without taking up valuable space in the department.
